

Rodent Protection Spray

Keeps rodents away from cables, conduits, plastic or rubber parts and electrical systems in homes and vehicles

The product covers the surface with a sticky fluid, which is used as a physical barrier to deter rodents

Simple and quick to use

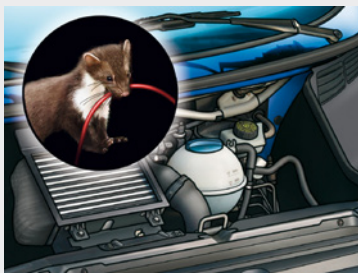

- Spray the areas to be treated and coat all sides
- Suitable for both internal and external use

Effect

- After drying, the product acts as an invisible barrier
- Prevents damage to plastic and rubber components

Details/Application

Instructions

For best results, first clean the surfaces to be covered of any dust and dirt, urine and faeces from rodents and feathers. Spray onto the surface at a distance of approx. 15-20 cm, then leave to dry. For optimal protection, we advise repeating the treatment regularly after 1 to 2 months.

Notice

Even if the technical advice provided is based on our experience and needs to be complied with, this is reference information only and must be confirmed in extensive practical testing. This does not exempt the buyer from their responsibility to first perform their own suitability testing for the intended use
