

## Sluggem Mix

Effective molluscicide and Insecticide

**Sluggem Mix** is a 50/50 mix of Sulggem Pellets, produced by traditional **Dry Pelletising** and Sluggem Prima, produced by **Wet Extruded process**.

The combination of the two products has the following benefits compared to regular pellets.

- Cost effective control
- Longer lifespan of product due to better weather resistance and robust qualities of Wet Extruded Pellets.
- More baits per Ha and higher density in bait distribution leading to more effective snail control.

The double active ingredient formulation with 30g/kg **metaldehyde** and 20g/kg **Carbaryl** will control **snails and slugs** as well as a broad spectrum of soil and debris dwelling **insects**.

### Use Mix For Better Protection

- High quality ingredients
- Weather resistant up to 21 days
- Highly palatable
- Dual active ingredient providing control of snails, slugs and soil and debris-dwelling insects
- Small Pellets size providing more baits per Ha and even distribution

### Specifications

<b>Appearance</b>	Green pellets
<b>Average Bait Size Pellets</b>	2.2mm diam, 4 - 5 mm long
<b>Average Bait Size Wet extruded</b>	2.2mm diam, 2.2 mm long
<b>Baits/kg</b>	More than 75 000
<b>Metaldehyde Content</b>	30g/kg
<b>Carbaryl</b>	20g/kg
<b>Available Pack Size</b>	25kg 500kg 1 000kg
<b>Process</b>	Dry pelletising & Wet Extrusion
<b>Shelf Life</b>	2 years
