

ORCHARD AGRI

Mulch Mats

This UV stabilised air and water permeable fabric is specifically designed as a hydrophobic anti-evaporation material for use in outdoor applications for up to four years, depending on the weight of the material (GSM) and specific exposure conditions. Unlike plastic film, this biodegradable material's higher resistance makes it last longer. Good perviousness of the weed matt ensures air, water and fertiliser reaches the plant base, and maintain root humidity while optimising growth.

50 gsm Mulch Mats

85 gsm Mulch Mats

120 gsm Mulch Mats

FEATURES:

- Superior non-woven fabric
- High tensile strength and puncture resistance
- Suppresses weed growth, saves on herbicides
- Advances soil temperatures
- Increases water and fertiliser absorption
- Reduces evaporation. Up to 50% less evaporation is observed compared to uncovered areas
- Better plant growth and yield
- Biodegradable material
