## Tucano Lopper

Professional straight shape lopper, suitable for pruning all plants. The movement assisted by the lever mechanism allows TUCANO to cut up to 1,77" diameter branches with minimum effort and no kick-back. The handles are made of oval shaped extruded aluminum with anodized surface capable of supporting extreme tension. The blade and tie-rod (without bush), made of a high percentage carbon steel, are hot-forged. The anvil has a lifetime guarantee against breakage while the anodized surface treatment increases resistance over time.
